Chevron  
6001 Bollinger Canyon Road  
San Ramon, California  
USA 94583

Dear Sirs/Mesdames:

**Re: Chevron Fair Share of Climate Costs in the Municipality of Bowen Island, BC, Canada**

We write as the Mayor and Council of the Municipality of Bowen Island, British Columbia. Like other communities around the world, we are increasingly concerned about the harmful effects that climate change will have on our community and on other communities around the world.

We are being forced to prepare for progressively more serious impacts. We are already facing increased fire risk, summer droughts (most of our residents' are on wells) and extreme winter rain events. Just this last winter unusually heavy and concentrated rains damaged our stormwater management system and a severe wind storm ripped away the moorings of our government dock. Repairs such as these are placing an increased burden on our municipal taxpayers. As a coastal community, we are also concerned about rising sea-levels and coastal erosion.

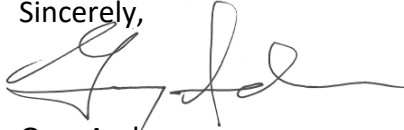

We expect the climate-related costs facing our community to rise as global temperatures increase and as we plan how best to help our residents withstand the current and expected impacts. A destabilized and more unpredictable climate – a result of fossil fuel pollution – is now inevitable, and growing more severe as you continue to market your products without aggressively moving to a different, more sustainable business model.

While we recognize that individual consumers, and our community, do play a role in the fossil fuel economy, your company has had the power to lead the transition away from that reliance, but has instead continued to market products that you have known, or should have known, would harm our communities.

We expect your industry to take cradle to grave responsibility for your product – and that starts by taking responsibility for its effects in the atmosphere and the resulting harm to communities. In addition, we would like to hear what steps you plan to take to reduce or eliminate the future impacts of your company's products on our community.

We will do our part to help our community manage the impacts from a new and unpredictable climate, and we look forward to your confirmation that you will do your part as well.

Sincerely,

A handwritten signature in black ink, appearing to read "Gary Ander". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Repairs such as these are placing an increased burden on our municipal taxpayers. As a coastal community, we are also concerned about rising sea-levels and coastal erosion.

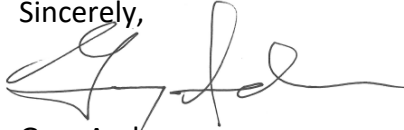

We expect the climate-related costs facing our community to rise as global temperatures increase and as we plan how best to help our residents withstand the current and expected impacts. A destabilized and more unpredictable climate – a result of fossil fuel pollution – is now inevitable, and growing more severe as you continue to market your products without aggressively moving to a different, more sustainable business model.

While we recognize that individual consumers, and our community, do play a role in the fossil fuel economy, your company has had the power to lead the transition away from that reliance, but has instead continued to market products that you have known, or should have known, would harm our communities.

We expect your industry to take cradle to grave responsibility for your product – and that starts by taking responsibility for its effects in the atmosphere and the resulting harm to communities. In addition, we would like to hear what steps you plan to take to reduce or eliminate the future impacts of your company's products on our community.

We will do our part to help our community manage the impacts from a new and unpredictable climate, and we look forward to your confirmation that you will do your part as well.

Sincerely,

Royal Dutch Shell plc  
PO box 162  
The Hague, The Netherlands

Dear Sirs/Mesdames:

**Re: Royal Dutch Shell plc Fair Share of Climate Costs in the Municipality of Bowen Island, BC, Canada**

We write as the Mayor and Council of the Municipality of Bowen Island, British Columbia. Like other communities around the world, we are increasingly concerned about the harmful effects that climate change will have on our community and on other communities around the world.

We are being forced to prepare for progressively more serious impacts. We are already facing increased fire risk, summer droughts (most of our residents' are on wells) and extreme winter rain events. Just this last winter unusually heavy and concentrated rains damaged our stormwater management system and a severe wind storm ripped away the moorings of our government dock. Repairs such as these are placing an increased burden on our municipal taxpayers. As a coastal community, we are also concerned about rising sea-levels and coastal erosion.

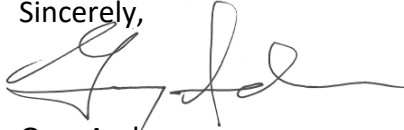

We expect the climate-related costs facing our community to rise as global temperatures increase and as we plan how best to help our residents withstand the current and expected impacts. A destabilized and more unpredictable climate – a result of fossil fuel pollution – is now inevitable, and growing more severe as you continue to market your products without aggressively moving to a different, more sustainable business model.
