B.C. Polling Results

West Coast Environmental Law for the Sue Big Oil Campaign

July 28, 2022

Bob Penner
Armand Cousineau
Prathit Patel
Grace Zhang

Vancouver | Edmonton | Toronto | Ottawa | Montreal | London | Brighton
The survey was conducted with 807 BC adults residents from July 7th to July 12th, 2022. A random sample of panelists were invited to complete the online survey from a selection of panels and river sources through Lucid.

These questions were part of Stratcom’s quarterly omnibus survey (BC Syndicated Polling).

Sample of 807 BC residents (18+) statistically weighted to match the gender, age, region and proportion of Chinese mother tongue in BC as per the 2021 Census. The data has also been weighted to match the popular vote as per the 2020 BC provincial election results.

Online polls don’t report margin of error, however a similar sized probability sample would have a margin of error of +/- 3.4%, 19 times out of 20.

Some charts and tables might not total 100% due to rounding.

All figures are percent (%) unless indicated otherwise.

All research conducted by Stratcom.
SUMMARY

- A majority (55%) believe climate change is already harming them or people they know. An additional 18% think the impacts of climate change will start to harm them or people they know within 10 years.
  - Women (61%) are more likely than men (50%) to think climate change is already harming them/people they know.
  - Belief that climate change is already harming them/people they know is relatively consistent across age groups, with 53% of respondents under 35 years of age saying that climate change is already harming them/people they know, vs 57% of those over 55 years.
  - Voters of all political parties were very likely to feel that climate change either was already harming them/people that they know, or will do so in the coming decade. Even among BC Liberal voters, who were less likely to see climate change as a current or imminent threat, 42% said that they/people they know are already being harmed, and 20.5% said that it would do so in the next 10 years.
  - A majority residing in Urban (58%) and Suburban (56%) areas think climate change is already harming them and the people they know, as compared to those residing in Rural areas (48%).
  - Respondents with different mother tongues had similar views on when climate change would harm them or people they know.
SUMMARY

A strong majority (69%) support local governments in BC working together to sue the world’s most polluting oil companies to make them pay for a share of the increasing costs of climate change. Almost two-in-five (39%) strongly support. Less than one-in-five (19%) oppose.

• This majority support is seen across main demographics, regions and voter type.
  • 84% of BC Green voters support this idea, 76% of BC NDP voters, 61% of BC Liberal voters and 63% of undecided voters.
  • This support is higher in Urban (70%) and Suburban (70%) areas than in Rural areas (60%).
  • High support rate is also seen across different mother tongues, English (69.7%), Chinese (71%) and other languages (65.7%) respectively, although “strong support” is slightly lower among those with a Chinese mother tongue (23%), as compared to English and other languages (both at 40%).
• Among those that state climate change is already harming them or people they know, almost 8-in-10 support this idea (78%).
